Dear Ms. Lefebvre,

On behalf of LINK Houston, I write this letter to urge to you to include non-car access to the FEMA COVID-19 community vaccination site at NRG in Houston. People with disabilities, people who do not have access to a vehicle, and aging persons who no longer drive are among the many people who cannot reach a “drive through” vaccination site. Equitable access to the vaccination distribution must include many mobility options – walking, wheelchair, transit, and even bike access -- for those who do not and cannot drive to reach the designated site.

While Harris County has several smaller vaccination distribution sites, the FEMA site at NRG offers the largest COVID-19 vaccine distribution in our region. As FEMA considers future vaccination distribution at NRG and brings additional sites online, we strongly urge FEMA and local partners to consider these transportation options:

- Allow walk-up access with clear, safe routes for people walking or using a wheelchair to proceed to the appropriate location on site;
- Place vaccination distribution sites near existing transit locations, especially near high-frequency bus routes providing service every 15 minutes or faster.
- Designate a location for people on bikes to park;
- Ensure that police or other traffic-safety personnel are aware of people walking, rolling, biking, and using transit and ensure their safety as they approach the site; and
- Continue to advise residents if there is a vaccination distribution site closer to their current location where they can ensure access.

LINK Houston advocates for a robust and equitable transportation network so that all people can reach opportunity. We believe transportation – how we get where we need to go – should not be a barrier to accessing COVID vaccines, jobs, education, healthcare, food, or anything else we need in our lives. People should be able to reach such opportunities safely and with dignity by walking, rolling, biking, and riding transit.

We appreciate your consideration and urge you to address these concerns immediately.

Respectfully,

Oni K. Blair
Executive Director
